EMAIL: 88ranch@gmail.com
www.88RANCH.com

Dear Valued Friends,

Welcome to our 31st Private Treaty Bull Sale Offering! Coming through one of the coldest January & February seasons ever, we've been busy trying to complete a fabricated 42 x 96 barn for parking machinery in and calving. In spite of it not being completely finished, we are utilizing it for night calving as new calves are arriving in subzero temperatures.

We have a terrific set of bulls offered for sale out of proven, A.I. Angus sires and 2 Gelbvieh herdsires we share an interest in to make Balancers. Our first calf heifers weaned off a terrific group of calves last fall that you need to pay close attention to. Several new bloodlines were used including the 2016 National Champion Balancer bull, Lifeline. We used 10 straws of Connealy Confidence Plus on heifers and didn't think much until weaning time when we wished we'd used a lot more. We've been told there is no more available unless you get lucky to find it and pay a terrific price. Our other exciting reference sires are featured throughout the catalog.

I am proud of the females that make up our herd. We don't have the feed resources to pamper our cows and make them soft. They rough it on cornstalks right up to calving time. The maternal traits bred into them and their breed composition makes them good mamas who continue to wean 50% of their body weight and breed back to calve again within a 365 day calving interval.

We are known as the "The Gals of The 88 Ranch" as my 3 Rancher's daughters and another who is like a daughter continue to contribute to our seedstock operation. The oldest, Cadrien, will be graduating from UNL at the end of 2019 with a degree in Ag Communications. She keeps our website going. Caitlyn, who is like a daughter, brings extra help down from SDSU on free weekends to assist with duties. She has helped with A.I. duties for years and shared several summers here. Carlee Jo is in 6th grade and proud of her red cows. Cassie is in 4th grade and is a great helper after school hours.

As usual, our procedure is to have you select the bulls you want and pay ½ down to hold them. The 88 Ranch keeps them free until April or May when deliveries begin. Second half is due at delivery. The bulls will be semen checked, vaccinated, and poured in March. Your satisfaction is important to us! We value long term relationships! We're looking forward to serving your needs! You may visit our website at www.88ranch.com to keep up with current data and pictures. Check back often for updates.

Sincerely,

Valerie Livingston and Gals of The 88 Ranch

EPD DEFINITIONS

MATERNAL TRAITS

Calving ease direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

Milk (Milk): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

GROWTH TRAITS

Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

CARCASS TRAITS

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

INDEXES

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. As an index, this value is not reported with an accompanying accuracy. A greater TM value means a mother that returns comparatively higher weaning weights on her calves. TM Index = MK EPD + ½ WW EPD.

Feeder Profit Index (FPI™): An economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on a grade and yield standpoint. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.

SAND DUNE 117D

Sand Dune 117D is a high percentage Gelbvieh we selected from Bar Arrow Cattle in KS. He's clean fronted, attractive, long bodied, and thick. They used him heavily through A.I. while we had natural service. We're both excited about the progeny as the daughters look awesome and the majority of sons were keepers.

Reference Sire
